为BinaryTree 类新增加一个函数void printBranch(void)
打印出该二叉树所有的最长枝

测试程序运行结果如下：

```
david@david-K401P:~/data-structure/BinaryTree$ ./test
Enter the root: A

Enter the sons of A (# is NULL node): B C

Enter the sons of B (# is NULL node): D #

Enter the sons of C (# is NULL node): # E

Enter the sons of D (# is NULL node): # F

Enter the sons of E (# is NULL node): G H

Enter the sons of F (# is NULL node): I #

Enter the sons of G (# is NULL node): J K

Enter the sons of H (# is NULL node): # M

Enter the sons of I (# is NULL node): # #

Enter the sons of J (# is NULL node): # #

Enter the sons of K (# is NULL node): # #

Enter the sons of M (# is NULL node): # #

Tree built successfully.
 A B D F I
 A C E G J
 A C E G K
 A C E H M
```
